## Setting up a redViper ZOMBIE account

redViper zombie accounts are the credentials that are hooked onto redViper implants. These accounts have the potential of being exposed, so **don't use any real accounts that have important information on them.** Since reddit doesn't require a valid email to create an account, its very easy to create a large amount of new accounts that can be immediately used as zombie accounts. As a general rule, you should use <u>at least</u> three zombie accounts during a redViper campaign, and evenly disperse your implant deployments between these accounts. Following the steps to create a zombie account takes less than 5 minutes and establishing multiple zombie accounts is critical to a secure redViper campaign.

### Step 1: Create a reddit API instance.

In order to follow the steps of this walkthrough, we first recommend switching to *Old Reddit*, which you can do via the highlighted button below. In the account dropdown menu:
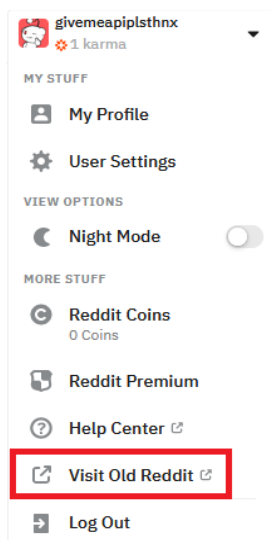

Once switching to *Old Reddit*, click the *preferences* tab on the top right of the page, right next to your account name/inbox:

Now near the top left of the preferences page, you should see a multitude of tabs. Click on the *apps* tab, then click the *are you a developer? Create an app...* button:
Upon clicking this button, you should now be at the *create application* page. Fill out the name and description with anything you want, as well as the redirect URI. One thing you must make sure to do, however, is select the *script* radio button highlighted below:

Once hitting the *create app* button, you should see an informational page of your newly developed app. Take note of the CLIENT ID and SECRET noted below; these will need to be provided during the redViper setup:

And that's it! Unlike master accounts, zombie accounts have no age or karma requirements, so feel free to continue making accounts until you feel you have enough

to securely use redViper. The more zombie accounts you establish and configure, the more secure and hardened your redViper campaign will be.

If there are any questions/confusion regarding these steps, feel free to reach out to me on twitter @kindredsec.
